

```
In [73]: total_immigration = df_can['Total'].sum()
Out[73]: 6409153.0
```

Using countries with single-word names, let's duplicate each country's name based on how much they contribute to the total immigration.

```
In [79]: max_words = 90
word_string = ''
for country in df_can.index.values:
    # check if country's name is a single-word name
    if country.count(' ') == 0:
        repeat_num_times = int(df_can.loc[country, 'Total'] / total_immigration * max_words)
        word_string = word_string + (country + ' ') * repeat_num_times

# display the generated text
word_string

Out[79]: 'China China China China China China China China China Colombia Egypt France Guyana Haiti India India India Ind
ia India India India India Jamaica Lebanon Morocco Pakistan Pakistan Pakistan Philippines Philippines Phi
lippines Philippines Philippines Philippines Philippines Poland Portugal Romania '
```

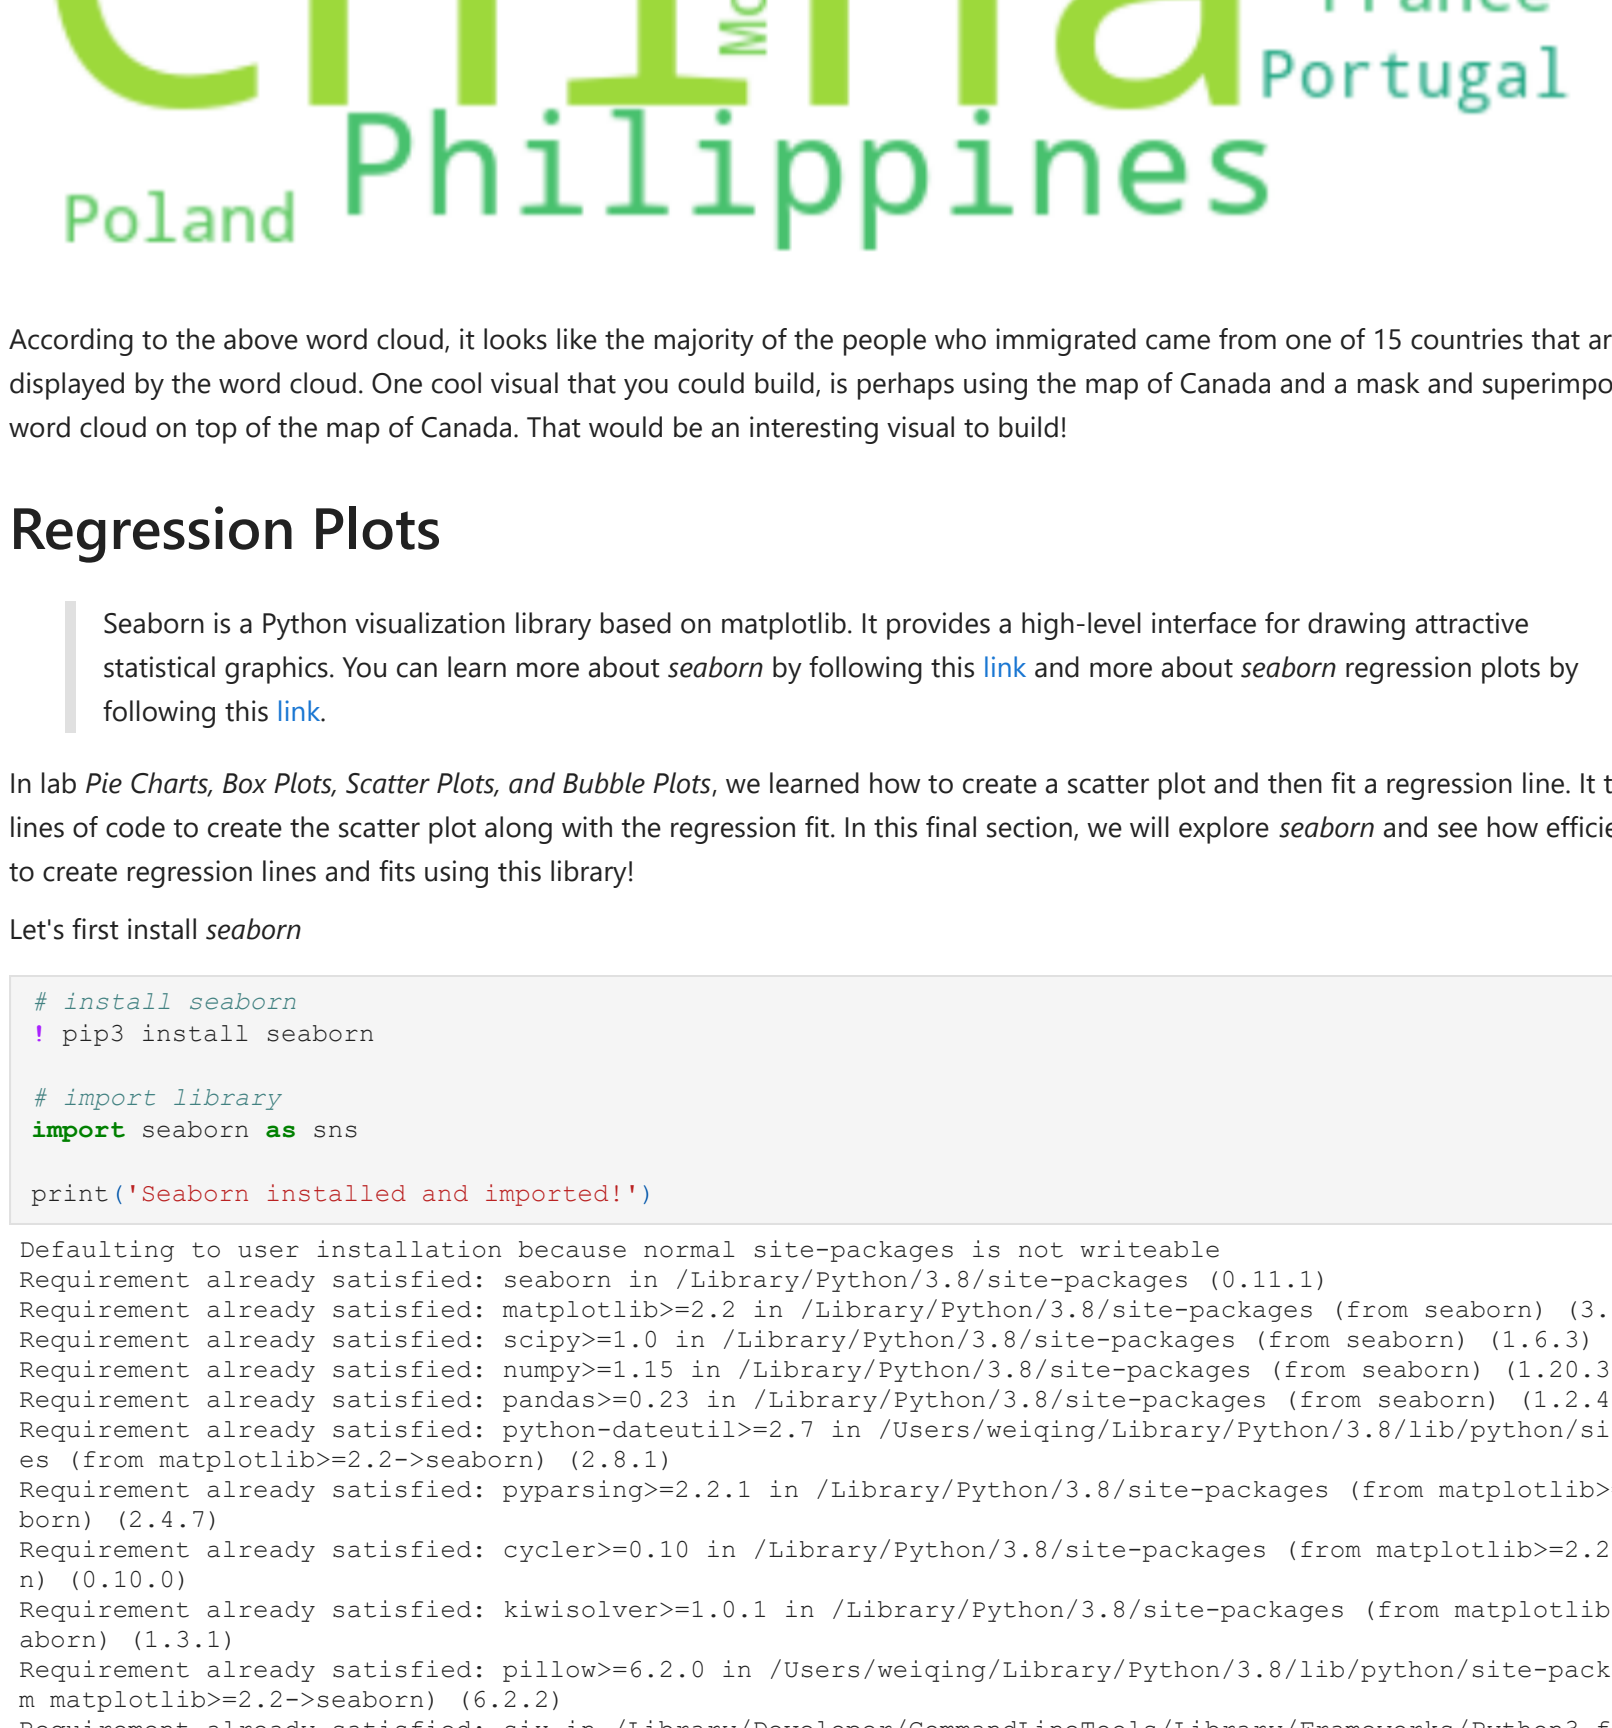

We are not dealing with any stopwords here, so there is no need to pass them when creating the word cloud.

```
In [80]: # create the word cloud
wordcloud = WordCloud(background_color='white').generate(word_string)

print('Word cloud created!')
```

Word cloud created!

```
In [82]: # display the cloud
plt.figure(figsize=(14, 18))
plt.imshow(wordcloud, interpolation='bilinear')
plt.axis('off')
plt.show()
```

According to the above word cloud, it looks like the majority of the people who immigrated came from one of 15 countries that are displayed by the word cloud. One cool visual that you could build is, perhaps using the map of Canada and a mask and superimposing the word cloud on top of the map of Canada. That would be an interesting visual to build!

Regression Plots

Seaborn is a Python visualization library based on matplotlib. It provides a high-level interface for drawing attractive statistical graphics. You can learn more about seaborn by following this [link](#) and more about seaborn regression plots by following this [link](#).

In lab *Pie Charts*, *Box Plots*, *Scatter Plots*, and *Bubble Plots*, we learned how to create a scatter plot and then fit a regression line. It took ~20 lines of code to create the scatter plot along with the regression fit. In this final section, we will explore *seaborn* and see how efficient it is to create regression lines and fits using this library!

Let's first install *seaborn*

```
In [84]: # install seaborn
! pip3 install seaborn

# import library
import seaborn as sns

print('Seaborn installed and imported!')
```

Defaulting to user installation because normal site-packages is not writeable

Requirement already satisfied: pytz>=2017.3 in /Library/Python/3.8/site-packages (from pandas>=0.23->seaborn)
(2021.3)
Seaborn installed and imported!

Create a new dataframe that stores that total number of landed immigrants to Canada per year from 1980 to 2013.

```
In [85]: # we can use the sum() method to get the total population per year
df_tot = pd.DataFrame(df_can[years].sum(axis=0))

# change the years to type float (useful for regression later on)
df_tot.index = map(float, df_tot.index)

# reset the index to put in back in as a column in the df_tot dataframe
df_tot.reset_index(inplace=True)

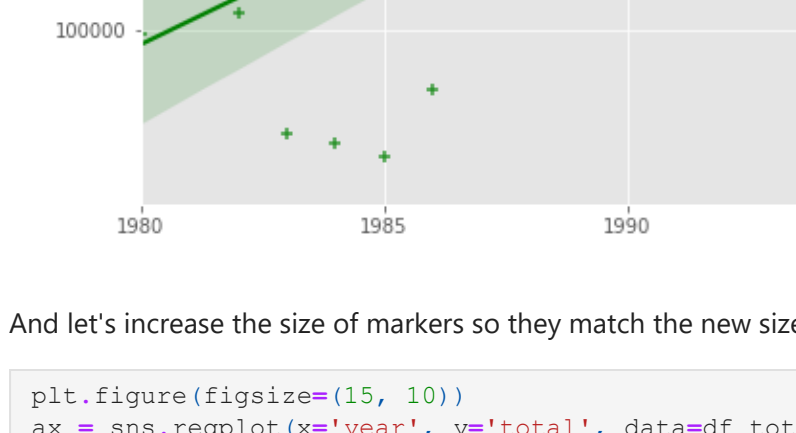

# rename columns
df_tot.columns = ['year', 'total']

# view the final dataframe
df_tot.head()
```

```
Out[85]:   year  total
0  1980   99137
1  1981  110563
2  1982  104271
3  1983   75550
4  1984   73417
```

With *seaborn*, generating a regression plot is as simple as calling the `regplot` function.

```
In [87]: sns.regplot(x='year', y='total', data=df_tot)
Out[87]: <seaborn.axis._Subplot>
```

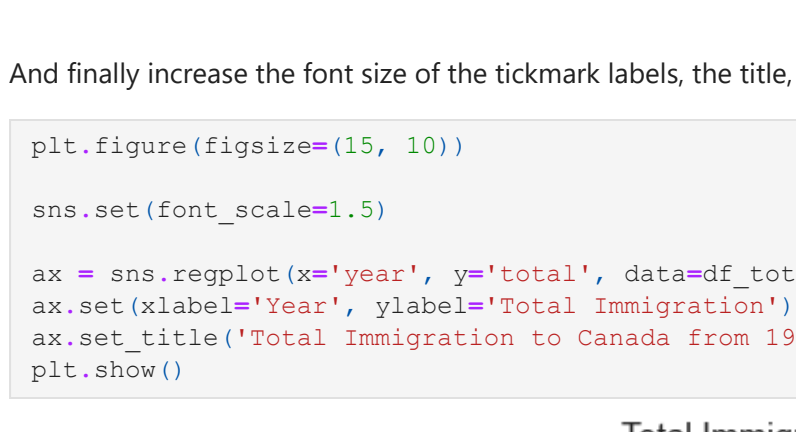

This is not magic, it is *seaborn*! You can also customize the color of the scatter plot and regression line. Let's change the color to green.

```
In [93]: sns.regplot(x='year', y='total', data=df_tot, color='green')
plt.show()
```

You can always customize the marker shape, so instead of circular markers, let's use '+'.

```
In [92]: ax = sns.regplot(x='year', y='total', data=df_tot, color='green', marker='+')
plt.show()
```

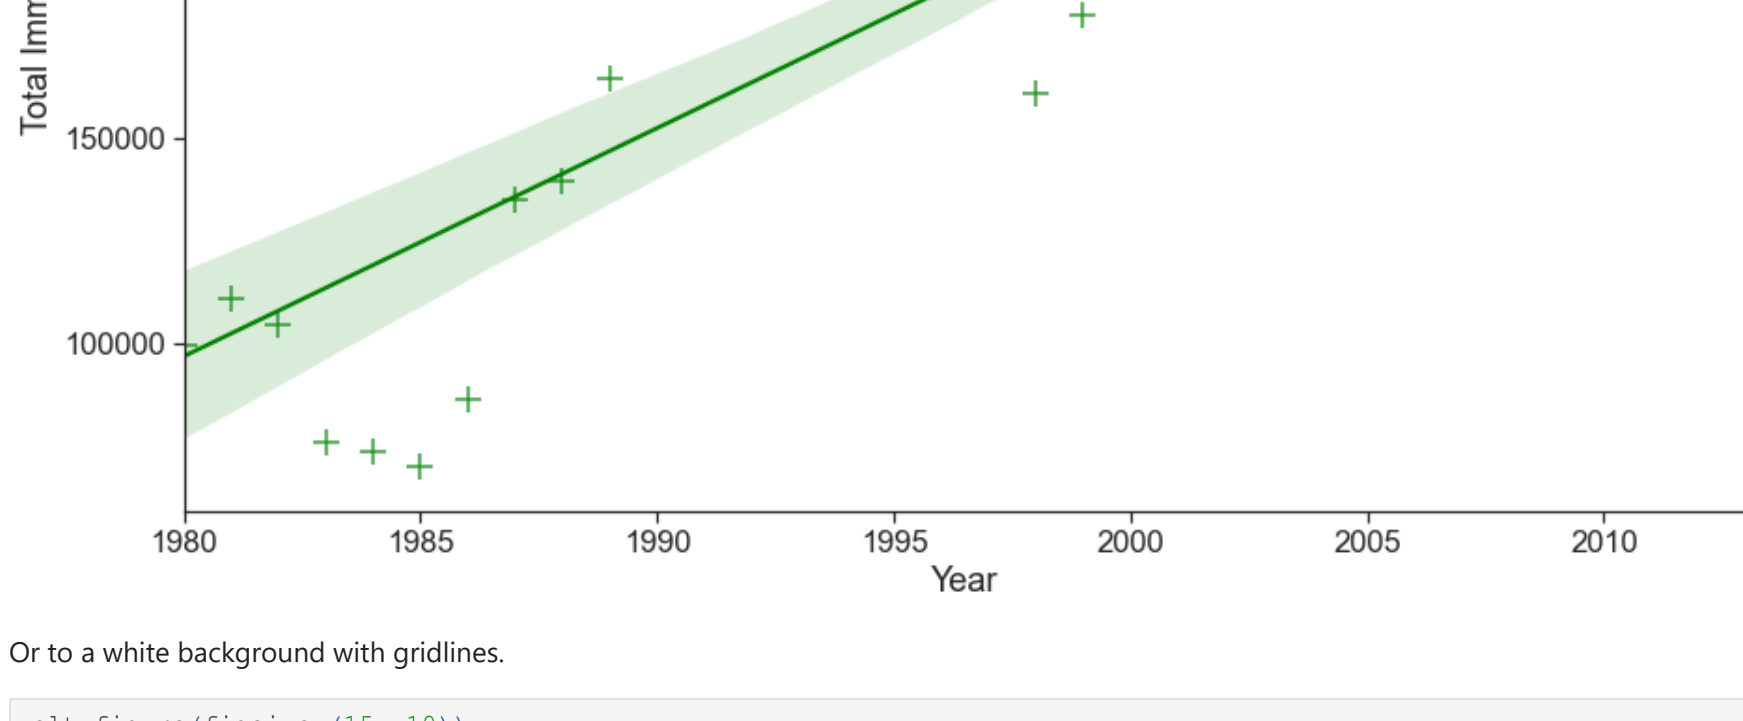

Let's blow up the plot a little so that it is more appealing to the sight.

```
In [91]: plt.figure(figsize=(15, 10))
sns.regplot(x='year', y='total', data=df_tot, color='green', marker='+')
```

And let's increase the size of markers so they match the new size of the figure, and add a title and x- and y-labels.

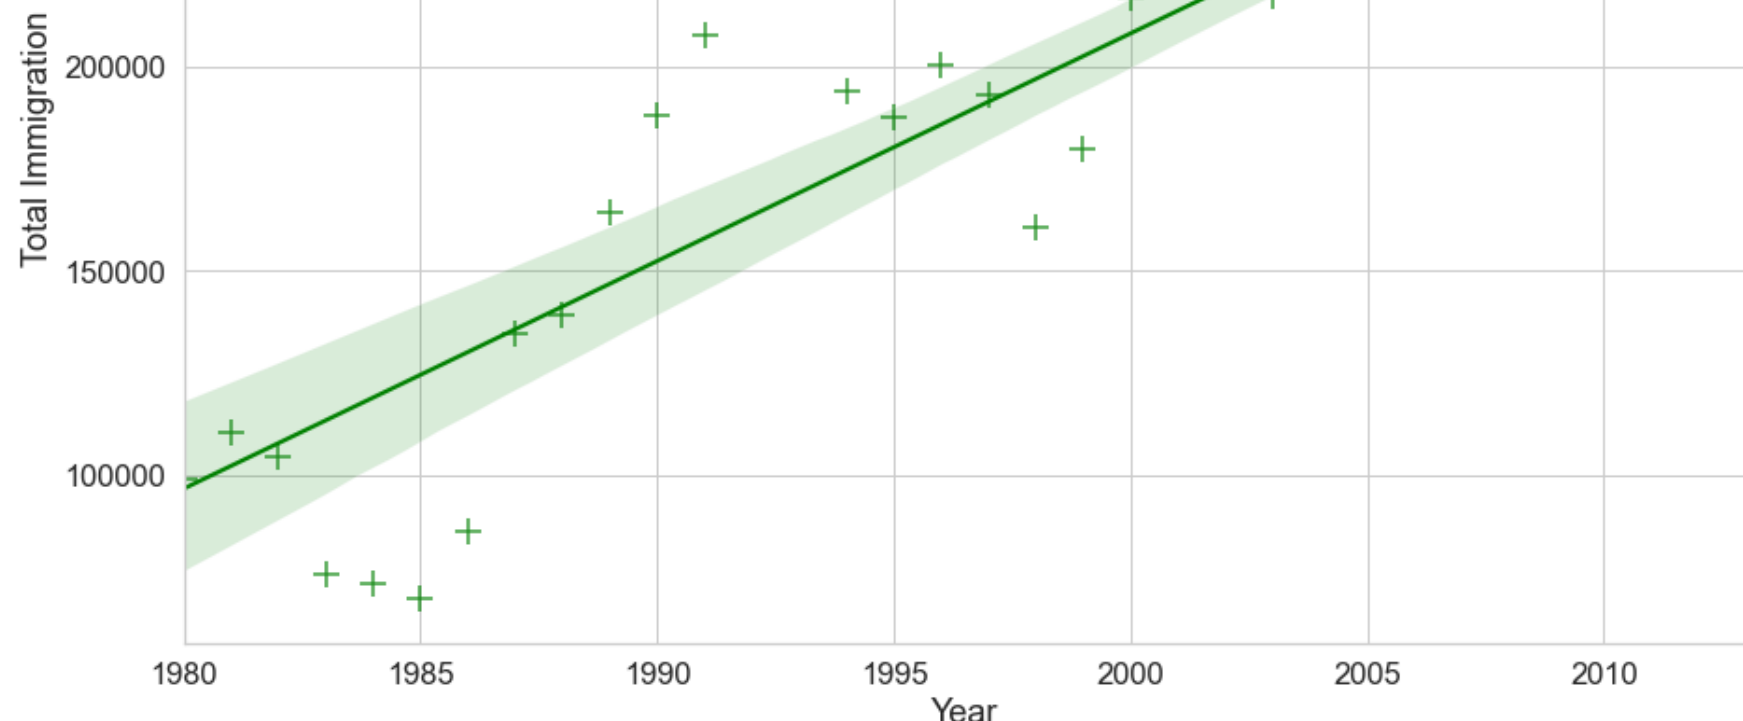

```
In [96]: ax = sns.regplot(x='year', y='total', data=df_tot, color='green', marker='+', scatter_kws={'s': 200})
ax.set(xlabel='Year', ylabel='Total Immigration') # add x- and y-labels
ax.set_title('Total Immigration to Canada from 1980 - 2013') # add title
plt.show()
```

And finally increase the font size of the tickmark labels, the title, and the x- and y-labels so they don't feel left out!

```
In [98]: plt.figure(figsize=(15, 10))
sns.set(font_scale=1.5)

ax = sns.regplot(x='year', y='total', data=df_tot, color='green', marker='+', scatter_kws={'s': 200})
ax.set(xlabel='Year', ylabel='Total Immigration') # add x- and y-labels
ax.set_title('Total Immigration to Canada from 1980 - 2013')
plt.show()
```

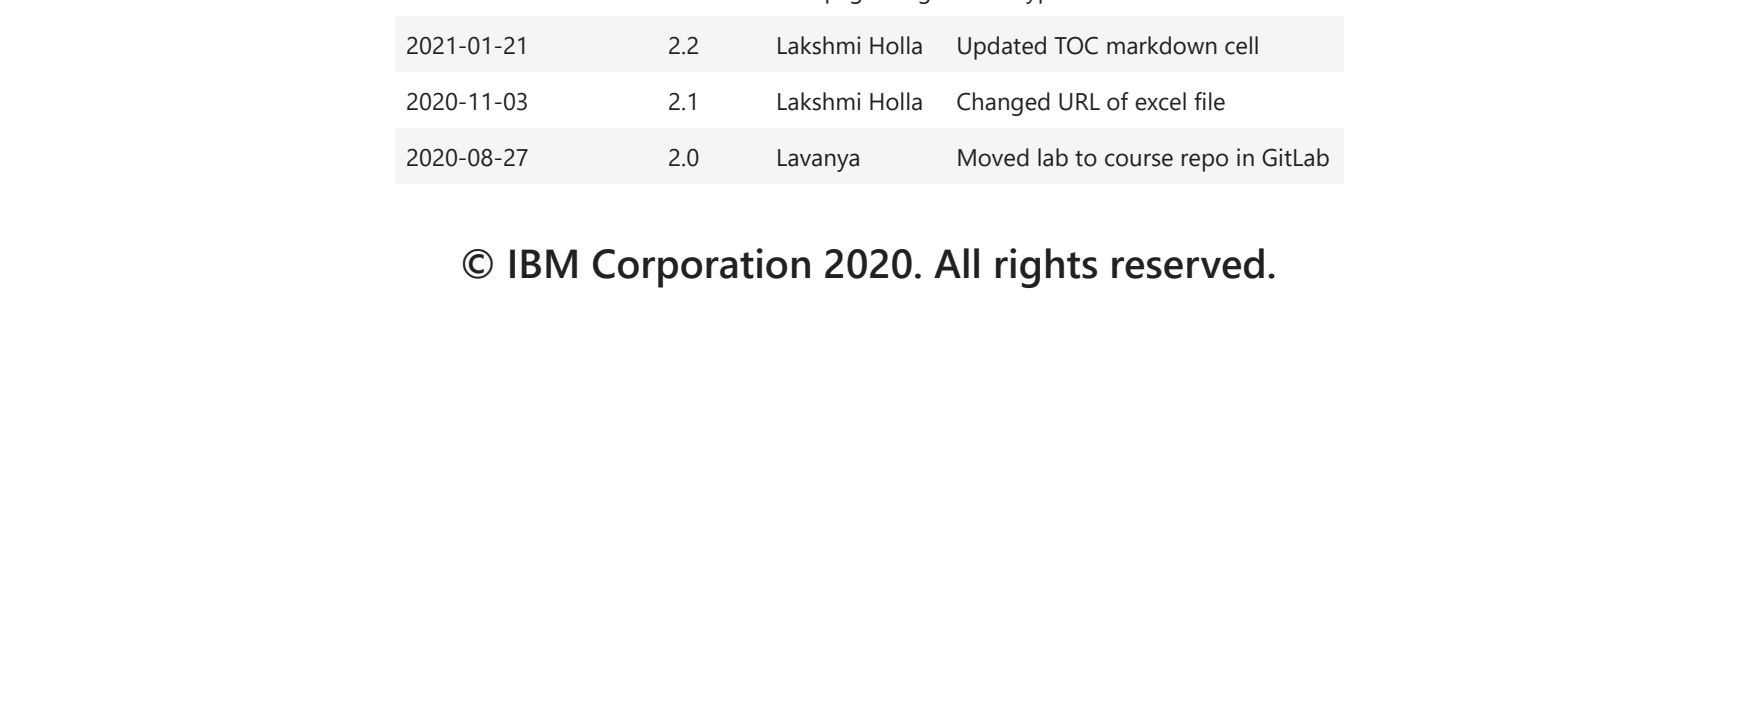

Amazing! A complete scatter plot with a regression fit with 5 lines of code only. Isn't this really amazing?

If you are not a big fan of the purple background, you can easily change the style to a white plain background.

```
In [99]: plt.figure(figsize=(15, 10))
sns.set(font_scale=1.5)
sns.set_style('whitegrid') # change background to white background

ax = sns.regplot(x='year', y='total', data=df_tot, color='green', marker='+', scatter_kws={'s': 200})
ax.set(xlabel='Year', ylabel='Total Immigration')
ax.set_title('Total Immigration to Canada from 1980 - 2013')
plt.show()
```

Or to a white background with gridlines.

```
In [100]: plt.figure(figsize=(15, 10))
sns.set(font_scale=1.5)
sns.set_style('whitegrid')

ax = sns.regplot(x='year', y='total', data=df_tot, color='green', marker='+', scatter_kws={'s': 200})
ax.set(xlabel='Year', ylabel='Total Immigration')
ax.set_title('Total Immigration to Canada from 1980 - 2013')
plt.show()
```

Question: Use *seaborn* to create a scatter plot with a regression line to visualize the total immigration from Denmark, Sweden, and Norway to Canada from 1980 to 2013.

```
